PROFESSIONAL SUMMARY

Software engineer and Quality Engineering Lead with 8+ years of combined development, automation, and quality-engineering experience across banking, SaaS, healthcare, and Cisco platforms. Hands-on work includes Python/Django REST APIs, React.js dashboards, AWS deployments, Docker/Kubernetes workloads, and data pipelines. Partners with Product and Engineering from requirements through validation and release readiness; mentors teammates and builds reusable automation. Uses GitHub Copilot for AI-assisted engineering with human review and requirements-based validation.

CORE SKILLS

Development & APIs: Python, Django, REST APIs, React.js, JavaScript, Java/Selenium automation, reusable application and test components.

Cloud & delivery: AWS/EKS/S3, Docker, Kubernetes, Git/GitHub, CircleCI, Azure DevOps, Jenkins, CI/CD, Airflow, Boto3, automated reporting, CloudTrail.

Data & quality: SQL, Snowflake, DBT, Kinesis Firehose, Elasticsearch; Pytest, Selenium/POM, Playwright, Cypress, Sauce Labs, API/data/mobile testing, chatbot testing.

Technical leadership: Business-needs analysis, SDLC/STLC, test planning, traceability, issue tracking, stakeholder communication, mentoring, concurrent release coordination, qTest/Jira, ServiceNow; Microsoft Excel reporting, Copilot, prompt engineering, responsible-AI governance.

PROFESSIONAL EXPERIENCE

Software Engineer in Test | Fifth Third Bank | 11/2023-Present

- Lead quality-engineering delivery for Time Deposits core conversion and FIS MBP releases, translating requirements into test plans and validating 140K+ source accounts and 90K+ converted certificates across DEV, QE, SIT/Stage, and UAT.
- Analyze business needs with business analysts, product owners, and business-line stakeholders; translate banking product rules and procedures into traceable test scenarios, Gherkin acceptance criteria, and UAT evidence.
- Coordinate test cycles and competing release priorities across project teams; track issues and report results in qTest/Jira. Lead triage and go/no-go discussions, communicate risks to leadership, and mentor teammates.
- Translated conversion requirements and COBOL logic into 45+ Python/Pytest tests; reconciled \$295M+ with \$0.00 variance and identified a \$140M product-mapping defect before go-live.
- Executed 160 multi-day GL exception scenarios using FIS MBP and Snowflake Pre-GL; validated reversals, EWP, accrual and interest mappings, and reconciled adjusted postings with Accounting.
- Validate deposit-product calculations and IRA reporting requirements, including FMV, RMD, and IRS/1099 regression across 185K+ accounts; automate interest tests across 50K+ certificates and Selenium/CICS regression.
- Developed Python reporting tools and Excel balancing workbooks for 24+ bank-level reports, reducing 1-2 hours of manual entry per application to under 20 seconds; standardized executive summaries as a company-wide template.
- Validated customer, account, and transaction feeds into NICE Actimize; developed Python/Pytest integration tests for data ingestion, processing outcomes, and cross-environment regression.
- Applied GitHub Copilot prompt engineering to generate, refine, and debug test automation and support COBOL analysis; reviewed generated outputs against source code and real data.
- Applied responsible-AI governance practices to AI-assisted QE, using human review and requirements-based validation of generated scripts and findings before relying on results.
- Coordinated ServiceNow production-incident follow-up with stakeholders, documenting impact, ownership, investigation status, and resolution outcomes.

PROFESSIONAL EXPERIENCE (CONTINUED)

Senior Data QA Engineer | StyleSeat, Inc. | 06/2022-10/2023

- Partnered with Product and Engineering on requirements, acceptance criteria, test scope, and production sign-off for a SaaS booking platform; led backend, API, data, and release testing across web, iOS, and Android.
- Prioritized P0/P1/P2 test cases in TestRail; expanded Pytest, Cypress, and Playwright regression suites across DEV, QE, Staging, and UAT.
- Integrated automated tests into CircleCI and Azure DevOps with failure alerts and reporting, supporting repeatable regression execution within CI/CD pipelines.
- Built a streaming-data ETL pipeline using Kinesis Firehose, Python, Airflow, Boto3, and Docker; validated outputs with SQL/DBT and automated Search API and Elasticsearch A/B testing.
- Improved data-pipeline and search quality, reducing search reindexing from 14 hours to 4 hours; developed end-to-end coverage for booking, search, calendar, and checkout.
- Used Sauce Labs for cloud-based browser compatibility and regression testing of web application workflows.
- Tested chatbot conversation flows and response behavior, covering expected user journeys, invalid inputs, fallback handling, and regression scenarios.

Python Automation Test Engineer | Cisco Systems, Inc. | 02/2021-05/2022

- Implemented Python/Selenium REST API and GUI automation for blade and rack servers using reusable Page Object Model components, data-driven tests, explicit waits, and cross-browser coverage.
- Created test plans and automated health checks; ran firmware, OS-upgrade, configuration, and TPM test cycles across DEV, QE, and staging.
- Partnered with development, hardware, and quality teams on requirements reviews, coverage gaps, defect triage, and server-platform release readiness.
- Developed Java/Selenium UI automation for server-management workflows alongside Python-based API and GUI tests.

Python Automation Engineer | Blue Cross Blue Shield | 09/2020-01/2021

- Built Pytest TDD/BDD frameworks and automated CloudTrail reporting; collaborated with data stakeholders to validate transfer and reporting outputs across test environments.
- Automated S3 transfers using AWS DataSync and Boto3, cutting transfer time by about 50%; reduced AWS costs by about 20% through usage analysis and resource cleanup.
- Developed Java/Selenium UI automation alongside Python test suites to support regression testing.

Software Engineer | Cisco Systems, Inc. | 12/2018-08/2020

- Deployed and validated containerized applications on AWS EKS using Docker and Kubernetes across DEV, Stage, and Production; wrote Python API scripts for enterprise SaaS deployment workflows.
- Developed Python/Django REST APIs and React.js dashboard components for internal deployment workflows, connecting frontend functionality to backend endpoints.
- Introduced reusable Selenium Page Object Model automation and Airflow job workflows to support enterprise application delivery and repeatable validation.

Research Assistant | Florida Institute of Technology | 01/2017-06/2018

- Developed a Python/Django application with REST APIs and automated Excel/CSV processing, connecting application functionality with data-processing workflows.

EDUCATION

Master of Science, Computer Information Systems | Florida Institute of Technology, 2018

Bachelor of Technology, Electronics & Instrumentation | Jawaharlal Nehru Technological University, 2015
