

NARENDRA JARJAPU

SOFTWARE ENGINEER IN TEST | QUALITY ENGINEERING LEAD | CORE BANKING & DATA QUALITY

Florence, KY | 321.525.3973 | jnarendra1410@gmail.com | [linkedin.com/in/narendra-jarjapu-a00477194](https://www.linkedin.com/in/narendra-jarjapu-a00477194) | Portfolio

PROFESSIONAL SUMMARY

Quality Engineering Lead and Software Engineer in Test with 8+ years of experience delivering test strategy, automation, and data-quality validation across core banking, SaaS, healthcare, and networking. Hands-on experience with FIS Modern Banking Platform (MBP), deposit conversions, general-ledger exception processing, ETL, data migration, mainframe systems, and financial reconciliation. Leads requirements analysis, risk-based test design, cross-environment execution, defect triage, stakeholder reporting, and release readiness. Builds reliable, traceable automation with Python, Pytest, SQL, and qTest.

CORE SKILLS

Core banking: FIS Modern Banking Platform (MBP), deposits (CDs, IRAs), core conversion, GL exception processing, GL posting and reconciliation, EWP, daily accrual, interest posting, COBOL, CICS/TSO.

Quality and data: test strategy and planning, requirements analysis, risk-based scenarios, data quality, ETL, data migration, source-to-target validation, financial reconciliation, test data and environment readiness, functional, regression, batch, API, UI, and UAT testing; defect triage, RTM, release readiness.

Tools: Python, Pytest, SQL, Snowflake Pre-GL, Tricentis qTest, Jira, Selenium WebDriver, Playwright, Cypress, AWS, Airflow, DBT, Docker, GitHub Copilot.

PROFESSIONAL EXPERIENCE

Software Engineer in Test | Fifth Third Bank | 11/2023-Present

- Lead quality strategy and test execution for Time Deposits core conversion and FIS MBP releases, validating 140K+ source accounts and 90K+ converted certificates across DEV, QE, SIT/Stage, and UAT.
- Translated conversion requirements into 45+ Python/Pytest tests for account, customer, branch, hold, and product mapping; validated COBOL source-to-target data, reconciled \$295M+ with \$0.00 variance, and identified a \$140M product-mapping defect before go-live.
- Executed 160 multi-day weekday/weekend GL exception scenarios for NRE and Citizens customer groups using FIS MBP and the Snowflake Pre-GL engine. Verified reversals and that EWP, daily accrual, posted/accrued interest, and interest earned mapped to the correct GL buckets; reconciled adjusted postings with Accounting to protect downstream financial processing.
- Automated EWP and daily-accrual interest scenarios (simple and compound, 360/365/366-day basis) across 50K+ certificates; supported IRA FMV, RMD, and IRS/1099 regression coverage across 185K+ accounts.
- Built Python balancing automation for 24+ bank-level reports across Time Deposits, RRS, and Safebox Accounting, reducing 1-2 hours of manual entry per application to under 20 seconds; standardized the resulting leadership report as a company-wide template.
- Managed requirements traceability, test cycles, evidence, automation results, and defect trends in qTest/Jira; led triage and go/no-go reporting with Engineering and business stakeholders, supported UAT sign-off, and mentored teammates in test design and Python/Pytest.
- Developed Selenium WebDriver Page Object Model regression flows for FIS MBP CD inquiry, setup, and maintenance; built Python FTP utilities for EBCDIC/packed-decimal extracts and automated CICS SafeBox regression.
- Created and tracked ServiceNow SnowTickets for production incidents, documenting impact, ownership, and updates.
- Maintained incident records and status through investigation, follow-up, and resolution.
- Coordinated with stakeholders on production incident handling and documented actions and resolution outcomes.
- Validated customer, account, and transaction data feeds into NICE Actimize.
- Developed Python/Pytest automation for Actimize integration testing, validating data ingestion, expected processing outcomes, and regression scenarios across test environments.

Senior Data QA Engineer | StyleSeat, Inc. | 06/2022-10/2023

- Led risk-based backend, data, and release testing for a SaaS booking platform across web, iOS, and Android; partnered with Product and Engineering on requirements, acceptance criteria, test scope, and production sign-off.
- Built a Kinesis Firehose ETL pipeline using Python, Airflow, Boto3, and Docker; validated data with SQL/DBT and automated Search API and Elasticsearch A/B testing.
- Expanded regression automation with Pytest, Cypress, and Playwright across DEV, QE, Staging, and UAT; integrated execution into CircleCI and Azure DevOps with failure alerts and reporting.
- Developed Playwright end-to-end coverage for booking, search, calendar, and checkout workflows; reduced search reindexing time from 14 hours to 4 hours through data pipeline and search-quality improvements.

PROFESSIONAL EXPERIENCE (CONTINUED)

Python Automation Test Engineer | Cisco Systems, Inc. | 02/2021-05/2022

- Implemented Python/Selenium REST API and GUI automation for blade and rack servers; built reusable Page Object Model, data-driven tests, explicit waits, and cross-browser coverage.
- Created test plans and automated server health checks; executed DEV, QE, and staging test cycles for firmware, OS upgrades, configuration, and TPM behavior.
- Partnered with development, hardware, and quality teams to review requirements, identify coverage gaps, triage defects, and report release readiness across server platforms.

Python Automation Engineer | Blue Cross Blue Shield | 09/2020-01/2021

- Automated Amazon S3 transfers with AWS DataSync and Boto3, cutting transfer time by about 50%; reduced AWS costs by about 20% through usage analysis and resource cleanup.
- Built Pytest TDD/BDD frameworks and CloudTrail reporting; worked with data stakeholders to validate transfer and reporting outputs across test environments.

Software Engineer | Cisco Systems, Inc. | 12/2018-08/2020

- Deployed and validated Docker/Kubernetes applications on AWS EKS across DEV, Stage, and Production; developed Python API scripts for enterprise SaaS deployments.
- Introduced Selenium/POM automation and Airflow job workflows; built React.js components for internal deployment dashboards backed by Python REST APIs.

Research Assistant | Florida Institute of Technology | 01/2017-06/2018

- Built a Python/Django application with REST APIs and automated Excel/CSV data processing.

EDUCATION

Master of Science, Computer Information Systems | Florida Institute of Technology, 2018

Bachelor of Technology, Electronics & Instrumentation | Jawaharlal Nehru Technological University, 2015
