NARENDRA JARJAPU

SOFTWARE ENGINEER IN TEST | QA AUTOMATION | QUALITY ENGINEERING LEAD

Florence, KY (Eastern Time) | 321.525.3973 | jnarendra1410@gmail.com

LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Quality Engineering Lead and SDET with 8+ years improving quality across banking, SaaS, healthcare, and enterprise technology. Drives practices beyond test execution through reusable automation, CI-integrated regression, and executive-reporting templates standardized company-wide. Hands-on Python/Java, API/UI and distributed-service testing, and AWS/containerized systems. Applies GitHub Copilot-assisted scenario design and test drafting within a human-reviewed shared regression workflow. Makes risk-based release recommendations, aligns Product, Engineering, and business stakeholders, mentors teammates, and investigates production issues using CloudTrail, Elasticsearch, and service data.

CORE TECHNICAL SKILLS

Automation & languages: Playwright, Pytest, Python, Selenium WebDriver/POM, Cypress, Java, JavaScript, REST APIs, TestNG (@DataProvider, groups), JUnit, REST Assured, reusable test frameworks.

Quality engineering: Manual and automated QA; test plans, test cases, scripts, checklists, and reports; functional, regression, integration, API, UI, data, mobile, cross-browser, and UAT testing; risk-based test design, defect lifecycle, root-cause analysis, release sign-off.

CI/CD & infrastructure: CircleCI, Azure DevOps, Jenkins, CI/CD test integration, failure alerts and reporting, Docker, Kubernetes, AWS/EKS/S3, Git/GitHub, Airflow, Boto3.

Test management & data: Jira/Xray, qTest, TestRail, test plans and executions, defect tracking and resolution, test evidence, SQL querying, database/source-to-target validation, Snowflake, DBT, Kinesis Firehose, Elasticsearch. Agile SDLC/STLC, requirements analysis, acceptance criteria, traceability, written status reporting, stakeholder communication, and mentoring.

PROFESSIONAL EXPERIENCE

Software Engineer in Test | Fifth Third Bank | Nov 2023-Present

- Lead manual and automated quality engineering for Time Deposits core conversion and FIS Modern Banking Platform releases; translate business and product requirements into test plans, test cases, traceable scenarios, acceptance criteria, and UAT evidence.
- Execute functional, regression, integration, and UAT validation across DEV, QE, SIT/Stage, and UAT for 140K+ source accounts and 90K+ converted certificates; coordinate test cycles, priorities, release readiness, and go/no-go reporting with technical and business stakeholders.
- Used GitHub Copilot in the team's Python/Pytest test-development workflow to turn conversion requirements into candidate scenarios, draft and refine tests, and surface edge cases; reviewed suggestions against COBOL logic and business rules before adding validated tests to the shared regression suite. Built 100+ tests, reconciled $295M+ with $0.00 variance, and identified a $140M product-mapping defect before go-live.
- Execute complex FIS MBP and Snowflake Pre-GL integration scenarios, validating reversals, EWP, daily accrual, interest, and GL mappings; reconcile adjusted postings with Accounting.
- Automate interest scenarios across 50K+ certificates and support IRA FMV, RMD, and IRS/1099 regression coverage across 185K+ accounts; develop Selenium WebDriver/POM flows for CD inquiry, setup, and maintenance.
- Built Python reporting tools and Excel balancing workbooks for 24+ reports, reducing manual work from 1-2 hours per application to under 20 seconds; standardized executive reporting company-wide and mentored teammates in test design and Python/Pytest.
- Track test plans, execution evidence, and defects in qTest/Jira; write clear reproduction details, communicate release-blocking risks, and coordinate triage through resolution. Support production incidents and ticket follow-up in ServiceNow, documenting impact, ownership, investigation status, and outcomes.

Senior Data QA Engineer | StyleSeat, Inc. | Jun 2022-Oct 2023

- Performed hands-on manual and automated backend, API, data, and release QA for a fast-paced SaaS booking platform across web, iOS, and Android; partnered with Product and Engineering on requirements, test scope, acceptance criteria, UAT, and production sign-off.
- Designed and maintained test scenarios and end-to-end Playwright coverage for booking, search, calendar, and checkout; expanded Pytest, Cypress, and Playwright regression suites across DEV, QE, Staging, and UAT.
- Scripted Java/TestNG data-driven automation using @DataProvider to exercise test cases across varied datasets and user profiles.
- Applied Test-Driven Development with JUnit to catch and resolve critical logic bugs before QA sign-off; refactored legacy code and implemented automated JUnit regression suites, reducing regression issues by 25%.
- Built REST Assured API regression coverage for service endpoints, validating response codes, payloads, and error handling.
- Grouped TestNG tests into smoke and regression suites with @Test(groups = {"smoke", "regression"}) for targeted execution and faster feedback.
- Integrated automated regression into CircleCI and Azure DevOps with failure alerts and reports; investigated failures and supported repeatable CI/CD validation for frequent releases.

- Built a streaming ETL pipeline with Python, Kinesis Firehose, Airflow, Boto3, and Docker; validated data with SQL/DBT and automated Search API/Elasticsearch A/B testing.
- Improved data-pipeline and search quality, reducing search reindexing from 14 hours to 4; tested chatbot journeys, invalid inputs, and fallback behavior; documented and retested issues through regression.

NARENDRA JARJAPU | PROFESSIONAL EXPERIENCE

Python Automation Test Engineer | Cisco Systems, Inc. | Feb 2021-May 2022

- Built Python/Selenium REST API and GUI automation using reusable Page Object Model components, data-driven tests, explicit waits, and cross-browser coverage.
- Created test plans and automated server health checks; tested firmware, OS upgrades, configurations, and TPM across DEV, QE, and staging.

  Used Jira/Xray for test management, organizing test cases and executions, recording results, and maintaining requirements traceability for server QA.
- Partnered with development, hardware, and QA teams on requirements reviews, coverage gaps, defect diagnosis, and server-platform release readiness; also developed Java/Selenium UI automation.

Python Automation Engineer | Blue Cross Blue Shield | Sep 2020-Jan 2021

- Built Pytest TDD/BDD frameworks and automated CloudTrail reporting; collaborated with data stakeholders to validate transfer and reporting outputs across test environments.
- Automated S3 transfers using AWS DataSync and Boto3, cutting transfer time about 50%; reduced AWS costs about 20% through usage analysis and resource cleanup.

Software Engineer | Cisco Systems, Inc. | Dec 2018-Aug 2020

- Developed Python/Django REST APIs, Python deployment scripts, and React.js dashboard components for enterprise SaaS workflows spanning frontend and backend services.
- Deployed and validated containerized applications on AWS EKS with Docker and Kubernetes across DEV, Stage, and Production; worked with RabbitMQ messaging.
- Introduced reusable Selenium/POM automation and Airflow workflows to support repeatable application validation and delivery.

Research Assistant | Florida Institute of Technology | Jan 2017-Jun 2018

- Developed a Python/Django application with REST APIs and automated Excel/CSV processing for data workflows.

EDUCATION

Master of Science, Computer Information Systems | Florida Institute of Technology, 2018

Bachelor of Technology, Electronics & Instrumentation | Jawaharlal Nehru Technological University, 2015
