NARENDRA JARJAPU

SOFTWARE ENGINEER IN TEST | LEAD QE | SENIOR DATA QA

Florence, KY (Eastern Time) | 321.525.3973 | jnarendra1410@gmail.com

LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Quality Engineering Lead and SDET with 8+ years across banking, SaaS, healthcare, and enterprise technology. Currently lead quality engineering at Fifth Third Bank and served as the sole QE lead at StyleSeat, owning test strategy, hands-on validation, automation, UAT, defect triage, and release readiness. Experienced with Python/Pytest, SQL, Snowflake, dbt, AWS, CI/CD, and large-scale data conversion. Reconciled $295M+ with $0.00 variance and caught a $140M defect before go-live; mentors teammates and communicates quality risks in clear business terms.

CORE TECHNICAL SKILLS

Automation & languages: Python, Java, JavaScript, Pytest, Selenium WebDriver/POM, Playwright, Cypress, TestNG, JUnit, REST Assured, REST APIs, reusable frameworks.

Quality engineering leadership: QA strategy, test plans/cases, manual and automated testing, functional/regression/integration/API/UI/data/UAT, risk-based design, defect triage, root-cause analysis, release readiness, mentoring.

Data quality & pipelines: SQL, Snowflake, dbt, data validation, ETL, data conversion, batch processing, Kinesis Firehose, Airflow, Elasticsearch.

CI/CD & infrastructure: CircleCI, Azure DevOps, Jenkins, Git/GitHub, CI test integration, Docker, Kubernetes, AWS/EKS/S3, Boto3.

Test management & reporting: Jira/Xray, qTest, TestRail, Agile SDLC/STLC, requirements traceability, stakeholder communication, status reporting, defect triage.

Banking & Mainframe: FIS Modern Banking Platform, IBM Mainframe, COBOL Batch, RAFT, FTP, EBCDIC/Packed Decimal, CICS screen automation, TSO regions.

PROFESSIONAL EXPERIENCE

Software Engineer in Test (Lead QE) | Fifth Third Bank | Nov 2023-Present

- Lead quality engineering strategy for Time Deposits core conversion and FIS Modern Banking Platform releases; translate requirements into risk-based test plans, traceable scenarios, acceptance criteria, and UAT evidence.
- Own test planning, prioritization, execution oversight, UAT, and release readiness across DEV, QE, SIT/Stage, and UAT for 140K+ source accounts and 90K+ converted certificates; communicate go/no-go status with business and technical stakeholders.
- Built 100+ Python/Pytest tests from conversion requirements and COBOL rules; reconciled $295M+ with $0.00 variance and caught a $140M product-mapping defect before go-live. Reviewed AI-assisted scenario suggestions against business rules before adding tests to shared regression.
- Lead validation of FIS MBP and Snowflake Pre-GL integration scenarios, including reversals, EWP, accruals, interest, and GL mappings; reconcile adjusted postings with Accounting.
- Automate interest scenarios across 50K+ certificates and support IRA FMV, RMD, and IRS/1099 regression coverage across 185K+ accounts; develop Selenium WebDriver/POM flows for CD inquiry, setup, and maintenance.
- Built Python mainframe FTP automation to download daily certificate and customer extracts, decode EBCDIC/packed-decimal data, and eliminate manual transfers for daily regression; automated CICS SafeBox Rental screen regression and used TSO regions for test execution and validation.
- Built Python reporting tools and balancing workbooks for 24+ reports, reducing manual work from 1-2 hours to under 20 seconds; standardized executive reporting company-wide and mentor teammates in test design and Python/Pytest.
- Track test plans, execution evidence, and defects in qTest/Jira; write clear reproduction details, communicate release-blocking risks, and coordinate triage through resolution. Support production incidents and ticket follow-up in ServiceNow, documenting impact, ownership, investigation status, and outcomes.

Senior Data QA Engineer (Lead QE) | StyleSeat, Inc. | Jun 2022-Oct 2023

- Served as the sole QE lead, owning quality strategy, planning, hands-on manual and automated testing, UAT, defect triage, and release readiness for customer-facing booking workflows across web, iOS, and Android; partnered directly with Product and Engineering.
- Designed and maintained test scenarios and end-to-end Playwright coverage for booking, search, calendar, and checkout; expanded Pytest, Cypress, and Playwright regression suites across DEV, QE, Staging, and UAT.
- Scripted Java/TestNG data-driven automation using @DataProvider to exercise test cases across varied datasets and user profiles.
- Applied Test-Driven Development with JUnit to catch and resolve critical logic bugs before QA sign-off; refactored legacy code and implemented automated JUnit regression suites, reducing regression issues by 25%.
- Built REST Assured API regression coverage for service endpoints, validating response codes, payloads, and error handling.
- Grouped TestNG tests into smoke and regression suites with @Test(groups = {"smoke", "regression"}) for targeted execution and faster feedback.
- Integrated automated regression into CircleCI and Azure DevOps with failure alerts and reports; investigated failures and supported repeatable CI/CD validation for frequent releases.
- Built a streaming ETL pipeline with Python, Kinesis Firehose, Airflow, Boto3, and Docker; validated data with SQL/DBT and automated Search API/Elasticsearch A/B testing.
- Improved data-pipeline and search quality, reducing search reindexing from 14 hours to 4; tested chatbot journeys, invalid inputs,

and fallback behavior; documented and retested issues through regression.

NARENDRA JARJAPU | PROFESSIONAL EXPERIENCE

Python Automation Test Engineer | Cisco Systems, Inc. | Feb 2021-May 2022

- Built Python/Selenium REST API and GUI automation using reusable Page Object Model components, data-driven tests, explicit waits, and cross-browser coverage.
- Created test plans and automated server health checks; tested firmware, OS upgrades, configurations, and TPM across DEV, QE, and staging.

  Used Jira/Xray for test management, organizing test cases and executions, recording results, and maintaining requirements traceability for server QA.
- Partnered with development, hardware, and QA teams on requirements reviews, coverage gaps, defect diagnosis, and server-platform release readiness; also developed Java/Selenium UI automation.

Python Automation Engineer | Blue Cross Blue Shield | Sep 2020-Jan 2021

- Built Pytest TDD/BDD frameworks and automated CloudTrail reporting; collaborated with data stakeholders to validate transfer and reporting outputs across test environments.
- Automated S3 transfers using AWS DataSync and Boto3, cutting transfer time about 50%; reduced AWS costs about 20% through usage analysis and resource cleanup.

Software Engineer | Cisco Systems, Inc. | Dec 2018-Aug 2020

- Developed Python/Django REST APIs, Python deployment scripts, and React.js dashboard components for enterprise SaaS workflows spanning frontend and backend services.
- Deployed and validated containerized applications on AWS EKS with Docker and Kubernetes across DEV, Stage, and Production; worked with RabbitMQ messaging.
- Introduced reusable Selenium/POM automation and Airflow workflows to support repeatable application validation and delivery.

Research Assistant | Florida Institute of Technology | Jan 2017-Jun 2018

- Developed a Python/Django application with REST APIs and automated Excel/CSV processing for data workflows.

EDUCATION

Master of Science, Computer Information Systems | Florida Institute of Technology, 2018

Bachelor of Technology, Electronics & Instrumentation | Jawaharlal Nehru Technological University, 2015
